

The employee data is stored in a table named **Employee** with structure bellow :

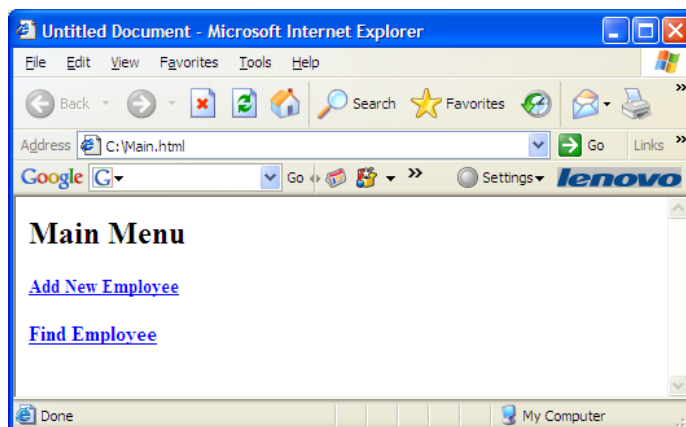

Field Name	Type
Empld	varchar(10) (Primary Key)
FirstName	varchar (20)
LastName	varchar (20)
Address	varchar (50)
Salary	int

The Entity Bean should allow the user to do the following activities.

- Create a new Employee in the database.
- Find the employees by their LastName.

Create a Web site which should consume this EJB :

- index.jsp** page:

- When user click "Add New Employee", the AddNew.jsp will be displayed.
- When user click "Find Employee", the Find.jsp will be displayed.

- AddNew.jsp** page:

- When user click "Insert" button web page will use this EJB to create a new Employee and insert into database.
- When user click "Reset" button web page will clear all textfield.
- When user click "Back to main menu" hyperlink Main.jsp will be displayed

- find.jsp** page:

- When user input LastName and click "Find" button, web page will use this EJB to find the employee with appropriate lastname(LIKE)
